International Symposium  
**"Water, Recycling and Waste  
Valorisation ", ERVD'3**

Fez, Morocco, 28 and 29 October 2015.

**PRESENTATION**

The Think Tank on Sustainable Development, **GRDD** continues its activities and interventions in all sectors related to the issue of sustainable development in our country : water quality , development of waste, the role of education and training, environment, human rights ...

After the success of its first and second editions, RVD'1 and ERVD'2, in May 2012 and June 2014, where , for once, in an event organized by the university, there were more industrials than academics, the international conference on "The water, Recycling and Waste Valorisation" **ERVD'3**, jointly organized by the GRDD and the SMBA University of Fez, 28 and 29 October 2015 at the Conference center of the Faculty of Medicine and Pharmacy of Fez, has been an opportunity to show that water recycling is now the third source of water, after the accessible fresh water and desalination. That mineral and organic waste is a very cheap gold mine for many countries forced to import the most of their needs in various materials and energy.

**ERVD'3** was an opportunity to :

- Consolidating the achievements of the first editions , particularly regarding partnerships between laboratories , between research groups and industry, between universities , etc.
- Educate decision makers and political and economic operators of the country on issues of this strategic sector for sustainable development in our country.
- Promote national scientific research in the fields of water treatment and management recycling and recovery of waste .
- Gather the actors involved in areas of water and waste.
- Strengthen scientific exchanges between national and international researchers in this field.
- Presentation of the latest scientific and technological advances in these areas.
- Make recommendations for the development of these strategic sectors in our countries.

Professor Farid ZERROUQ  
Chairman of ERVD'3,  
President of GRDD
